

60 Day Oracle Production Scheduling Implementation Model

Maximize the Benefits of Production Scheduling with a Quick Return on Investment (ROI)

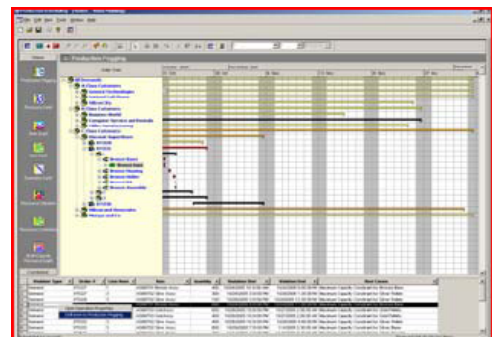

- Do you follow a manual spreadsheet based production scheduling process?
- Do you find it difficult to develop a feasible Production Schedule honoring all the material and resource constraints?
- Are you able to evaluate the impact of unplanned production and down time on the Production Schedule?
- Are you not able to provide your customers accurate order fulfillment dates?
- Do you want top supply chain planning expertise but without stretching your project budget?

If the answer is yes, you have come to the right place! Our solutions focus not only on resolving the business issues but also on their high rate of adaptability.

Constraint-based Production Scheduling

Our 60 Day Production Scheduling implementation model is based on the business flows approach and is best suited for companies already on Oracle Manufacturing. Our accelerated implementation model helps companies realize the benefits of the Oracle Production Scheduling capabilities in a short period of time. Our approach helps clients estimate the time and cost of internal and external resources, thereby, maintaining tight control over budget allocation.

Our pre-configured industry standard business processes based add-on kit provides a mechanism to jump start the implementation. This benefits our clients as they have a baseline industry standard practices process flow from day one which reduces the implementation time. Our demo-based requirement gathering and design process approach greatly enhances the client understanding of the end to end business flows.

Implementation Goals

- Model Production Scheduling process
- Production Schedules constraint by bottle-neck resources
- Minimize changeover times and reduce the cost of production
- Improved collaboration among schedulers during scheduling process
- Accurate order promising and fulfillment dates
